GUARANTEE OF SATISFACTION—We positively guarantee all seeds and plants sold by us to be exactly as described in this catalog, and free from disease and insect pests. We also guarantee them true-to-name, and will replace, free of charge, any that may prove otherwise through a possible error.

While we guarantee all seeds and plants to reach you in good growing condition, we do not guarantee crop, and cannot be held responsible if later the plants fail. The life of a plant after it reaches the planter in good condition depends entirely upon conditions over which we have no control. A tree, shrub or other plant is a living organism, as much as a cow, horse or man. It breathes, drinks and feeds, and is subject to attacks of disease and insects. Even with our superior quality seeds and plants, success depends largely upon cultivation, soil and weather conditions, so it is therefore agreed that in no case shall the Oriental Seed Co., be liable for more than the original purchase price.

Acres of Chinese Cabbage on Our Paoting-fu Farm in Chili, China

Chinese Cabbage 支那白菜

(Chinese Celery Cabbage)

This exceptionally fine vegetable is of the cabbage family from china and possesses some distinguishing characteristics which place it, as a cabbage, in a class entirely by itself. In shape it is unlike any other familiar type of the cabbage family. Its habits of growth resemble Cos-lettuce, while the outer leaves, except in their elongated shape, resemble ordinary cabbage leaves in general texture. When the outside leaves are stripped away we see an appetizing picture of lettuce and celery combined, presenting a cool, crisp, inviting appearance well-nigh irresistible.

Shredded and served raw, it outclasses the finest cabbage salad, or with dressing the best raw cabbage salad; its tenderness

and mild flavor make it peculiarly appetizing. It may also enter into a combination salad, by stripping the leaves from the central stalks and cutting up the stalks as with celery, for which it makes an excellent substitute. The stalks, when stripped, appear like celery and will be eaten with an equal zest. When cooked in any of the ways in which ordinary cabbage is used, it not only equals, but, in some respects, surpasses the latter.

The culture is the same as for spinach or lettuce. The seed should be sown any time after May, and for main crop from July to September, $\frac{1}{2}$ inch deep in the row and rows about 24 inches apart. When the plant has grown up 5 to 6 inches thin out to 10 inches apart. Cultivate well and when large enough they should be blanched by earthing up and tying closely with burlap. Any good soil is sufficient, but they seem to head up best in rich black adobe soil. One ounce of seed is enough for 500 feet of drill.

“PAOTING” (genuine “WONG-BOK”) Registered brand (銹球白菜) Big compact tender and crisp. An excellent “Wong-Bok.” We have found this to be absolutely the best firm-heading “Chinese Cabbage” to grow during the summer months. It will not scald or burn and will make a head when other varieties fail. It somewhat resembles “Kinshu” in shape and “Shantung” in character of leaf, color and size, but the head is more tightly compacted. It will produce a head of 15 pounds and will stand long before bolting to seed. It is excellent in quality; crisp, tender and brittle, with a fine celery flavor. We recommend it either for the market gardener, trucker or private planter, as it is a perfect “Chinese Cabbage” in every respect, not only being in the largest size, but of handsome color and of the finest quality. It is probably the safest variety for an amateur to plant, as it does well at all seasons and one is almost sure of getting a crop. It is vigorous and free from insects. (Pkt. 10c.) (Oz. 50c.) (4 Ozs. \$ 1.50) (lb. \$ 5.00) (2 lbs. \$ 8.00) postpaid. This seed grown in our Paotingfu Farm, in Chili, China.

CHE-FOO (芝罘白菜)—One of the most excellent varieties. Large outside leaves with a dark greenish color and the inside is compact, tightly grown, and has a beautiful white, crisp appearance with a mild cabbage flavor, delicate and delicious. It is naturally very hardy and productive and will stand against insects. (Pkt. 10c.) (Oz. 30c.) (4 Ozs. \$1.00) (lb. \$3.00) (2 lbs. \$4.80) postpaid.

CHIHILI Pe-Tsai—Same type the above but grow taller and narrow. (Pkt. 10c.) (Oz. 35c.) (4 Ozs. \$1.10) (Lb. \$3.50) (2 Lbs. \$5.60) postpaid. Imported seed.

HOGYOKU WONG-BOK (抱玉白菜)—The best and most popular grown, known for its quality and compact leaves which are tightly held together. The leaves have some wrinkles and grow more like head cabbage, a little shorter than "Chokurei" or "Shantung." Easy self-blanching. The heart is snowy white. Mild flavor, crisp and tender. (Pkt. 10c.) (Oz. 30c.) (4 Ozs. \$1.00) (lb. \$3.00) (2 lbs. \$4.80) postpaid.

SHANTUNG WONG-BOK (山東白菜)—A production of Shantung, a province in China. Distinctive flavor, very mild and pleasant. The outside leaves grow to a large, round leaf, the heart is snowy white with compact leaves tightly held together. We recommend this as a most excellent sort (Pkt. 10c.) (4 Ozs. 60c.) (lb.

Chinese Cabbage, Che-foo (芝罘白菜)

for either home garden or market planting. \$2.00) (2 lbs. \$3.20) postpaid.

CHOSEN PE-TSAI (朝鮮白菜)—This is an old and popular standard variety of Pe-Tsai with excellent flavor. Original Korean production. Grows up more like the Cos-lettuce, with broad clumped leaves and of easy culture, tender and mild in cabbage flavor. (Pkt. 10c.) (Oz. 20c.) (4 Ozs. 60c.) (lb. \$1.80) (2 lbs. \$3.00) postpaid.

CHOKUREI PE-TSAI (直隸白菜)—Easily grow to 7-8 pounds a head in ten weeks. A most excellent one among the varieties. Large outside leaves with a yellow striped color and the inside leaves grow round gradually, more like the Cos-lettuce. The heart is pure white, tender, sweet, and delicate in taste. The young leaves are very popular for use in salad. It is very hardy and will keep until early spring if placed in the cellar. The tender leaves make it a desirable plant for poultry greens; much more economic and desirable than alfalfa, swisschard or lettuce Etc., because it can be grown with less care and in any convenient place about the premises. Try it for your hens. One ounce will sow 100 feet of row. (Pkt. 10c.) (Oz. 20c.) (4 Ozs. 60c.) (lb. \$2.00) (2 lbs. 3.20) postpaid.

Scarlet Runner (紅花いんげん)

One of the pride of Chinese flowering beans that has been planted chiefly for ornamental purposes. But few people know that the Scarlet Runner may be planted May 1st and in six weeks attain a height of eight feet, and rapidly cover an arbor with vines twenty feet long. In northern location where summers are cool and short this takes the place of the Large Lima Bean. When fully ripened the dry beans are of bright scarlet, heavily blotched with purple. (Pkt., 10c.) (lb., 45c.)

FUJIMAME BEAN (Dolichos Lablab (ふじ豆)) (Imported Seed)—Sometimes called as "Daylight" or "Hyacinth Bean" on account of their handsome flowers. One of excellent snap bean varieties. The pods are about four inches long, of medium size, well filled, the beans very thick, tender and of fine quality. The plants are very robust, never coming into contact with the ground. It yields continuously all summer, in this respect superior to any other sort. (Pkt., 10c.) (lb. 40c.) (10 lbs. \$3.50).

Col repollo **CABBAGE** (キャベチ) 甘 藍 カンラン

It is difficult to give definite cultural directions for cabbage, since it is possible to have good cabbage at all seasons of the year in some part of the country. Seed may be planted almost any time of the year. However, there are the seasons preferable for sowing—in September for early spring cabbages, from January to April for summer and fall cabbages, and July to August for winter cabbages. Sow the seed $\frac{1}{2}$ inch deep and transplant the early varieties to rows 24 inches apart and 18 inches apart in the rows. They will mature in about 105 days. The late varieties mature in about 150 days and should be planted in rows 30 inches apart and 24 inches apart in the row. To prevent the heads from splitting open before they are ready to be harvested, the plants should be loosened a little at the root. Cabbages require plenty of moisture, but too much water causes them to rot very readily.

One ounce will produce 1,000 plants and will mature in about 150 days. Sow as directed for cabbage, and set the plants in rows 2½ feet apart and 2 feet apart in the rows. Young plants are bushy, but as soon as they are well established begin to throw out runners and climb, so may be grown on fences, poles or trellises, thus saving much valuable space in small gardens. Fruits 9 inches in length by 2½ inches across when mature, of fine green color; flesh is thick and firm, never bitter, a superb variety for slicing. When young, makes fine pickles. “ORIENTAL'S CHINA-LONG”

A most remarkable and handsome new long green out door cucumber from China. The most fleshy and finest flavor of the long green type. The vines make a tremendous growth. They are unusually vigorous, bearing an enormous crop. The foliage is rich dark green and is quite resistant to diseases and insect attack.

ORIENTAL'S CHINA-LONG makes perfectly straight fruit. They average about 20 inches. They are thickest in the middle of fruit, where they average 2 to 3 inches in diameter. The attractive fruit taper gently toward the ends, holding their thickness well until they run off into a round stem and blossom end.

The skin of the fruit is a beautiful rich dark green set with a number of the characteristic long green. We have many enthusiastic letters from customers who have proclaimed it the most beautiful and best of all long green cucumbers. A most remarkable feature of **ORIENTAL'S CHINA-LONG** is the fact that it retains the beautiful deep green color of the skin until it is fully ripe.

ORIENTAL'S CHINA-LONG is practically all flesh, containing but very few seeds. The thick flesh is a beautiful white. It is crisp, juicy, and of the most delicious flavor, and essentially a qualified cucumber which is absolutely unequalled for market or home use.

The fine large long fruits are extra fine for slicing, but if picked when of small size, they make tasty little pickles. The people in China store surplus products for their winter table after cutting into four or five pieces and drying. The vigorous vines bear continuously, particularly if the fruit is picked as soon as it has reached a good size.

We recommend this novelty cucumber as much the best of all, and the variety anyone should plant. This seed grown in our Paotingfu Farm in Chili, China. (Pkt. 10c.) (Oz. 50c.) (4 Ozs. \$1.75) (lb. \$5.00) postpaid. Imported Seed.

SWEET CORN (コーン)

One of the garden's sweetest vegetables. Plant from February 15th to August 1st, in rows 3 feet apart, drop 6 or 7 kernels in hills every 18 inches in the row and thin out to two of the healthiest plants in each hill when about 5 inches high. Break off all side shoots except the two top ones as they will produce the largest and best ears. Corn is at its very best when picked and eaten within an hour, but it is extremely important that it be picked just at the right time especially when not too old. Frequent plantings of several varieties in succession will keep a good supply available all summer.

MUSHROOM SPAWN (茸の種子)

CULTURAL DIRECTIONS

Ten pounds will spawn about 10 feet square. Mushrooms can be grown in any dark room or cellar where the temperature can be kept at from 50 to 70 degree. From some old pasture procure good, rich soil, and to every bushel of this soil add 2 bushels of fresh horse manure. Of this well-mixed compound prepares a bed, say, 4 feet wide. Put down a thin layer and pound it down hard, and go on until you have a bed 12 or 18 inches thick. As soon as the temperature of the bed falls from 75 to 50 degrees, the spawn may be inserted in pieces about the size of a walnut, about 2 inches deep and 6 inches apart. Cover with loamy soil about 2 inches deep and beat it down evenly and firmly. Finish off with a covering of clean hay, about a foot thick, and the work is done. If the temperature is right, in 6 or 8 weeks you may expect mushrooms. The beds will continue bearing from 20 to 30 days. After the first crop is gathered spread over the bed an inch of flesh soil, moisten with warm water, and cover with hay as before. The main conditions in mushroom growing are proper and uniform temperature and very rich soil.

Klondike Watermelon
(クロンダイク ウオタメロン)

KLONDYKE—A great favorite of recent introduction. Oblong, dark rich green, flesh bright red, very crisp and sweet. We first offered the Klondike watermelon in 1914. It gained in popularity each year, first in one market then another. On account of the thin rind and extreme crispness the shipper was slow to accept it. But its extreme popularity impelled the shipper to grow it. Each year a larger acreage was planted, bringing greater profit to the grower. Although having a very thin rind it is a better shipper because it does not wilt. We now feel that the Klondike has fairly won the title. "The Prince of all Watermelons." The seed is small. One pound of Klondike will number as many seeds as two pounds of other varieties. The color of the seed is brown, mottled black. (Pkt., 10c.) (oz. 25c.) (¼ lb. 85c.) (lb. \$2.50) (2 lbs., \$4.00)

TOMATO *Tomate* (トメート)

(サンノゼ キャンナー)
San Jose Canner Tomato

For early plants sow in hotbeds early in March or April, in drills 5 inches apart and $\frac{1}{4}$ inch deep; when the plants are about 2 inches high, transplant into another hotbed 4 inches apart each way; plant out in the open ground early in May, or as soon as danger from frost is over, 4 feet apart each way in hills, which should have a shovelful of well-rotted manure mixed with the soil. Water freely at time of transplanting, but after the plants are well established water sparingly and at the roots only, as spraying the vines and overwatering causes the blossoms to drop off; when the first fruit is set, pinch off the ends of the branches to obtain early fruit. Sufficient plants for a small garden can be grown in a shallow box by placing it in a sunny window in a warm room. For late use sow in a sheltered border in May, and set out the plants in July; the green fruit can be picked off before frost and ripened under glass. By training the vines on trellises or trying to stakes, the fruit will ripen better and be of finer quality. The fruit matures in 150 days.

THE ROSE

December, January, February and March are the best months for planting but should the season be favorable you can still plant during the early part of April. The plants sent out during these months are what we call dormant two-year-old budded plants. Roses give best results when planted in a fairly sunny location and in good heavy sediment soil to which may be added some old manure or bone meal, but never use fresh manure. When planting straighten out all roots and as the dirt is filled in see that it is well packed around them; this keeps out the air and encourages a new growth of rootlets. Be sure that the Rose is planted so that the point where it is budded shall be just below the surface.

Keep the ground moist until the flower spikes begin to appear, then water freely. The bulbs should be taken up in the fall, after the leaves have become yellow, and then stored in a cool, dry place, free from frost. From December to April are the months to plant Gladiolus.

Japanese Giant Chrysanthemums 日本秋菊

The Chrysanthemum is the queen of autumn flowers. Nothing is more beautiful as house plants, in the late fall and early winter, than these large, fluffy, Japanese varieties. For massive blooms, grandeur of colors, ease of culture and certainty to flower there is no plant that will surpass them. The endeavor of nearly all growers has been, in late years, to introduce varieties which will produce the largest and finest blossoms for exhibition purposes. It is from these varieties that this seed is saved. These plants are easily raised from seed. Almost all the new and striking varieties are the result of plants grown from seed, and the amateur is as liable to originate new and splendid varieties as is the professional florist.

They are of the easiest culture and always give satisfaction as house plants. The blossoms you get will surprise you with the odd and beautiful forms of the flowers and abundance of bloom. If you want a magnificent collection of these gorgeous Chrysanthemums—red, white, yellow and pink—you will make no mistake in getting a packet of our select seed.

We sell the seed in packets only, and guarantee it to be from the genuine large flowered Japanese varieties, imported seed. Pkt., 25c; 3 pkts., 60c, postpaid.

Choice Chrysanthemum Plants

Set out the plants about 2 feet apart in well fertilized ground. After the young plants have grown 2 inches pinch them back about 4 inches, then each plant will send out from 3 to 4 stems. In order to give strength to the blossoms, cover the ground with a layer of an inch or two of decayed manure. As soon as the buds appear on the stems, let the largest remain and pinch off all others.

Ready about May 1. (Each 20c.) (6 for \$1.00) postpaid.

MAJOR BONNAFFON—Deep yellow, incurved.

MEUDON—Immense pink, broad, long, drooping petals, full in the center.

MRS. G. G. MASON—Clear-blood-red.

PINK TURNER—Clear lavender-pink, incurved.

WILLIAM TURNER—Pure white, incurved.

YELLOW TURNER—Light yellow, incurved.

Tree and Shrub Seeds 庭木の種子

Most tree seeds are better sown in the latter part of winter or spring, though there are many that can be sown at any time, and some which must be sown while the seeds are quite fresh. Most kinds are best sown in boxes, of light, well-drained soil, covering the seed about its own depth or some of the larger ones a little deeper, press the soil down slightly with the hands. Keep in a lath house, frame, or some sheltered place and water carefully. As soon as large enough to handle, pot and grow on until large enough to plant in the open ground, where they are to remain. Pines and other Conifer seeds are best sown in March and April; use a soil containing plenty of decomposed granite and always water in the morning and not at night, as the young seedlings "damp off" very easily. Acacia seeds should be soaked in hot water for twelve hours or more before sowing.
